Compatible With Other Brands

Maximum Power: 96.6W - 103.5W Depending On Size
Variable Down To 0W with Powerlet PHG-305 Controller

Pouch: 11" x 8" x 2"

Country Of Manufacture: Pakistan & Finished In U.S.A.

Warranty

The electrical components are warranted to be free from factory defects in materials and workmanship for the lifetime of the garment. All other (non-electrical) components of the garment are warranted to be free from factory defects in materials and workmanship for a period of one year.

ProForm™ torso & arm panels stretch to assure a snug, form fit. It is widely known that a snug fit is key to providing maximum heat transfer. With our ProForm™ panels, one size can tolerate personal weight fluctuations and provide freedom of movement - a feature not found in other heated clothing. These Lycra panels ensure simple sizing when purchasing and provides comfort for years to come. Freedom of movement combined with industry leading warmth makes for a safer and more comfortable riding experience.

The premium collar is lined with Polartec® fleece and contains heating elements. Polartec® fleece is comfortable to sensitive neck skin and also wicks away the rain. The heating elements found in the collar provide warmth that can be felt throughout the body and providing a truly memorable riding experience.

The liners unique sleeve finishing decreases the bulk under your jacket and glove in the wrist area. This feature allows for watches to be worn and outer jacket zippers to be zipped!

Powerlet ProForm™ liners provide industry leading warmth in extreme cold conditions. Full heat coverage is achieved by wiring the front, rear, arms and collar of the liner.

Adding heated gloves is simple. Powerlet ProForm™ liners also employ zippers on all of the cable openings to ensure that unused glove connectors do not get in the way when taking on/off your outer jacket. The gloves can be powered by either the liner controller or a second independent glove controller. Cables for the second glove controller connection point are also stored inside a zippered pocket.

And of course all of our Powerlet heated clothing is designed to work with any of our Powerlet socket kits. By powering your heated clothing from the vehicle using a quality Powerlet socket kit there is no need to recharge batteries and you will never be left riding in the cold. One Powerlet socket kit can power all of your appliances including: heated clothing, GPS, cell phones (with a convenient PAC adapter), tire inflators, etc. Keep in mind you can also maintain/charge your vehicle battery using the same Powerlet socket that is powering your heated gear.

A convenient pouch is standard with every Powerlet ProForm™ jacket liner. The liner is designed for a small pack down size so it can easily be carried with limited space on the bike.

We recommend using a temperature controller with all Powerlet ProForm™ heated jacket liners. Running the liner directly connected to the bike will be to warm in all but the most extreme cold conditions. Also this controller will limit the power drawn from the bike allowing the liner to be used on both large and small bikes.
